CAREER TECHNICAL EDUCATION

Career Technical Education (CTE) provides students of all ages with the academic and technical skills, knowledge and training necessary to succeed in future careers and to become lifelong learners.

Coalinga High School
ROP/CTE

PHILOSOPHY

I believe that standards should be high and students learn more by being challenged. One of my favorite quotes is, "Those who aim for the moon and fail land on top of the trees. Those who aim for the top of the trees, never get off the ground." I want my students to understand that setting high goals will take them further. I want them to learn that they will not always succeed, but they must try for they will be better for the effort. This of course must be balanced with their abilities, but the overall plan is to challenge them and facilitate their success. This philosophy aligns with the goals of Career Technical Education, which prepares students for success in both academic and technical fields.

TECHNOLOGY PATHWAY

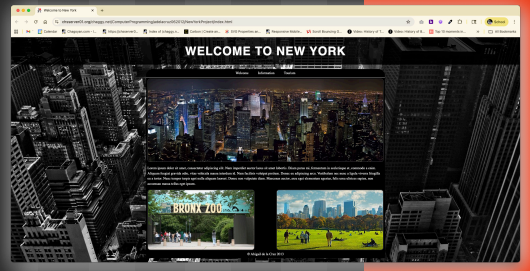

Our Technology Pathway is composed of two courses - Web Page Design and Web Application Development. Completing this pathway prepares students for technical careers such as Graphic Designer, Web Designer, Web Developer, and Computer Programmer among others.

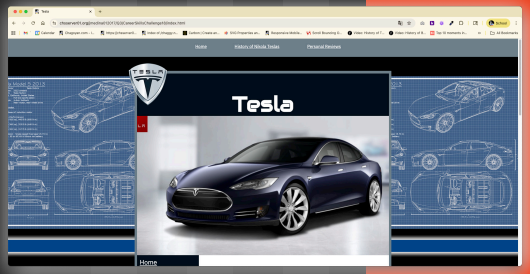

Web Page Design (Introductory)

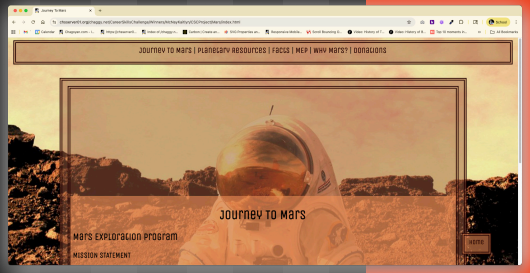

Have you ever wondered how the Internet and the World Wide Web work? Have you ever thought about building your own web page? This introductory course is designed for students with a wide range of computer experience. Students learn Internet and web concepts, file management, keyboarding, the web design process, color theory, graphics, HTML, CSS, hyperlinks, tables, and responsive web design using Visual Studio Code and Photoshop. Students build career-readiness skills and develop a career portfolio website that they publish to the school network, and may use approved A.I. tools to support their learning.

Web Application Development (Advanced Capstone)

Web Application Development is the second course in the Technology Pathway and builds on the skills from Web Page Design. Students strengthen their keyboarding and career-readiness skills, learn the Terminal, Git, and GitHub, and publish and maintain responsive career portfolios online using Netlify and Cloudflare while preparing for the Career Skills Challenge. They continue with advanced Photoshop and CSS, interactive design, and foundational JavaScript, completing individual and team projects. A.I. is integrated throughout for research, design, development, troubleshooting, and career preparation, and students learn to evaluate, test, and modify A.I.-generated results. Exact tools and projects may change as the course evolves.
