COALINGA HIGH SCHOOL – Technology Pathway Syllabus

Web Page Design and Web Application Development – 2026-2027

Instructor: Mr. Chagoyan
Location: North Wing - Room 308
Email: mchagoyan@chusd.org

Course Descriptions

Web Page Design (intro)

Have you ever wondered how the Internet and the World Wide Web work? Have you ever thought about building your own web page? This introductory course is designed for students with a wide range of computer experience. Students develop practical computer skills while learning Internet and web concepts, file management, keyboarding, color theory, graphics, HTML, CSS, and responsive web design. Students write code with Visual Studio Code, create and optimize images with Photoshop, and build webpages for phones, tablets, laptops, and desktop computers using techniques such as flexbox and media queries. Students develop a career portfolio website on the school network and may use approved A.I. tools to support learning and creative work. The course provides useful technology skills for all students, including those who do not continue into Web Application Development.

Web Application Development (capstone)

Web Application Development is the second course in the Technology Pathway and builds upon the HTML, CSS, responsive design, and digital portfolio skills introduced in Web Page Design. Early in the course, students learn the Terminal, Git, GitHub, and modern deployment using platforms such as Netlify and Cloudflare. They publish and maintain responsive online portfolios while preparing for the annual Career Skills Challenge competition. Students then expand their skills through CSS Grid, media queries, interactive design, and other modern web technologies before transitioning into foundational JavaScript and application development. Artificial intelligence and modern A.I. tools are integrated throughout the course for research, design, development, troubleshooting, communication, and career preparation. Students explore A.I.-assisted workflows while learning to evaluate, test, modify, and explain generated results. Exact tools and projects may change as the course evolves.

General Objectives

By the end of these courses, you will be able to:

- Utilize web authoring and graphics software efficiently and effectively
- Create functional, responsive webpages and interactive applications using HTML, CSS, and foundational JavaScript
- Apply modern development workflows, problem-solving, debugging, version control, and online publishing
- Use A.I. responsibly for research, design, development, troubleshooting, and creative problem solving while evaluating its output
- Build and maintain a career portfolio that demonstrates technical, academic, and career growth; Web Application Development students publish and maintain their portfolios online

Materials Needed

You will need the following for these courses:

- District issued Gmail account for Google Classroom, online learning platforms, and our local school network.
- GitHub account and an approved online deployment account such as Netlify or a similar platform.
- District approved software and services such as Visual Studio Code, Adobe Creative Cloud, web browsers, and approved A.I. tools.
- District issued MacBook Air and access to classroom computers.

There are no textbooks for these courses. All material is learned via lecture, demonstrations, hands-on activities, Google Classroom, teacher-created resources, and other online resources.

Teacher Bio

I am a teacher, techie, father, and dancer. I love technology and problem solving. Prior to teaching, I did most of my development work for AT&T where I created intranet websites, applications, and databases. These days, I focus on teaching, spending time with family, and hitting the gym. I also dance salsa, bachata, cumbia, and merengue for fun.

Course Communication

Class announcements will be posted on Google Classroom. You can get in touch with me via email or Google Classroom. To expedite a response, when contacting me, you should provide the following in your subject line:

- Your full name
- Your Period (1, 2, 3, 4, 5, 6, or 7)

Example: Johnny Bravo - Period 5

I expect to get a lot of emails. I usually reply quickly, but it may take up to 24 hours to receive a reply during the week and 48 hours on the weekend. Do not wait until the last minute to send a message for help.

If you have a question about the course or an assignment, I encourage you to contact me.

Behavior Standards/Consequences

The following class guidelines are to be followed:

- **Pay attention to the teacher** - No talking while the teacher is talking (announcements, demonstrations).
- **Raise your hand for assistance** - Be patient. My TAs and I will get to you ASAP.
- **Work quietly** - Collaboration is encouraged but keep volume low.
- **Take care of computer equipment** - Do not change computer settings without permission.
- **Use technology responsibly** - Follow school policies and teacher directions for Internet, A.I., and online tools.

Students are expected to attend, be on time, and follow school and class guidelines. Unauthorized Internet game playing and Web surfing **will lead to a refocus form and you falling behind.** Be careful. It is easy to fall behind.

Grading Policy

Assignments have different point values based on their scope, complexity, and time required.

Grades are calculated from total points earned divided by total points possible.

Students are allowed to resubmit work multiple times for an improved grade.

Grading Scale	
A+	97-100
A	93-96
A-	90-92
B+	87-89
B	83-86
B-	80-82
C+	77-79
C	73-76
C-	70-72
D+	67-69
D	63-66
D-	60-62
F+	57-59
F	53-56
F-	0-52

Assignment Policy

You will be assigned graphic, coding, development, A.I.-assisted, career-readiness, and project-based assignments, as well as videos or other resources to review on your own. All assignments will be posted on Google Classroom and/or my website. **Be aware that not all assignments will be graded based on the discretion of the teacher.**

Work will be submitted via Google Classroom and through course websites when appropriate. Web Page Design students develop websites on the school network. Web Application Development students publish and maintain websites and career portfolios online.

A.I., Collaboration, and Academic Integrity

Using classmates, documentation, tutorials, search engines, and approved A.I. tools to learn is often appropriate in technology courses. A.I. may be used for research, brainstorming, design, explanation, troubleshooting, debugging, coding, communication, career preparation, and other tasks when permitted. Students may explore current A.I.-assisted tools and workflows as part of the course. A.I.-generated work is not automatically correct. You are responsible for reviewing and testing the output, understanding the work you submit, and being able to explain, modify, or improve it. Simply copying another person's completed work and presenting it as your own is not acceptable. Different assignments may have different restrictions; follow the directions given for each assignment.

A.I. can code, but humans solve problems.
